5 Complete the text with the correct form of the words in the box.

– (x2) • exercise • look • predict • read • that • when • where • which (x2) • whose

Smart inventions

Usually, I like (1) future developments in technology, but today, let's stop (2) at a few of my favourite inventions from the last year or so. I'm not talking about major new technologies here, but fun things (3) you can use in your everyday life. The first invention, (4) costs less than \$60, is for people (5) want to take beautiful photos on their phones. It's a light (6) you can attach to your phone and adjust until your photo looks just right. The second idea is ideal for anyone (7) job allows them to work from anywhere. It's a mobile, solar-powered 'office pod', a place (8) you can work in comfort from any location. The third invention is for people who like (9) regularly but don't always enjoy it. It's a virtual reality app which lets you exercise in amazing locations, like a tropical island or even another planet! The app, (10) you use with your smartphone, is perfect for those days (11) you don't feel like going to the gym!

Will these inventions become popular? It's hard to tell. A long time ago, I remember (12) about smartphones and thinking 'People won't buy those.' I guess I was wrong about that one!
